

Climate Proofing of Watershed Development Projects in the States of Rajasthan and Tamil Nadu”: The project focuses on climate-proofing of 20 watersheds in Tamil Nadu and Rajasthan. The overall objective is to build adaptive capacities of the communities to shifting rainfall patterns and extreme weather events exacerbated by climate change in the rained areas of these two states. NABARD has already been supporting watershed development programme in various states of India under Watershed Development Fund (WDF) and this project seeks to scale up small-scale initiatives of climate proofing already undertaken on pilot basis, to a larger area in Tamilnadu and Rajasthan, so as to have tangible and concrete impact on communities in building climate resilience. The project is being executed by multiple NGOs with a total budget of USD 1.344 million.
