

“Increasing Adaptive Capacity to Climate Change through Development of Climate-Smart Villages in Select Vulnerable Districts of Madhya Pradesh”

is being executed by State Knowledge Management Centre on Climate Change (SKMCC), The Environmental Planning & Coordination Organization (EPCO) and Urban Development and Environment Department, Government of Madhya Pradesh with an outlay of Rs. 24.88 Crores. This project aims to increase the adaptive capacity of farmers through capacity building and diversify livelihood options through appropriate interventions like nutrient management, water conservation techniques, energy smart techniques and soil rejuvenation techniques. The project would benefit around 1.28 families of small and marginal farmers in total 60 villages (20 villages in each of 3 developmental blocks) of Sehore, Rajgarh and Satna districts in MP.
